PSYCHOLOGICAL RESPONSE TO SURFACE-COLOR

Berkeley Parks
M. Architecture
University of Washington

Section I of this bibliography consists wholly of articles that discuss studies dealing with color response. This section is subdivided into five categories which reflect the major issues that surfaced in an overview of the available literature. These categories include:

- A. Development of Color Sense
- B. Order of Preference
- C. Past Experience and Color Modification
- D. Color Connotation and Association
- E. Color and Judgement

Section II consists of articles and books dealing with general background information on color perception and also more specific knowledge tangential to the studies in Section I.

SECTION I: STUDIESA. Development of Color Sense
